WORK EXPERIENCE

Full Stack Developer

Noesis Knowledge Solutions Pvt. Ltd.

06/2018 – 07/2019

Mumbai

Helps to capitalise business opportunity with cutting-edge technology solutions that make future technologies more accessible to businesses today

Responsibilities

- Built the frontend of an E-commerce application using HTML, CSS, SCSS, Bootstrap and JQuery.
- Implemented the backend of an E-commerce application using PHP and Wordpress along with third party API integration like Eshopbox, Capillary and Razorpay.
- Built an application to manage more than 1000 users with their transaction data using PHP, SQL and Wordpress.
- Built the frontend of a hybrid app using Ionic and SCSS.
- Collaborated with other developers and managers to meet client demands and deadlines.

PROJECTS

1. Smartbrain Face Detection (<https://smartbrain-face-detection.herokuapp.com/>) (08/2019 – 09/2019)

- This web application allows the user to detect faces in the image uploaded by them using Clarifai face detection API.
- Users can register and upload the image.
- An entry count is maintained for every user which indicates how many times the user has detected faces.
- This app was built using React, NodeJS, Express and PostgreSQL.

2. Robofriends (<https://keyur22.github.io/robofriends-v2/>) (07/2019 – 08/2019)

- This application allows the user to search his friend by name from a collection of robofriends.
- JSONPlaceholder API was used to get user data and Robohash Web service was used to create robot avatars of users.
- Used Redux for state management and Redux Thunk for handling async data.

3. Budget App (<https://keyur22.github.io/budget-app/>) (07/2019 – 08/2019)

- This application allows the users to track their incomes and expenses for the current month.
- ES5 Javascript was used to implement OOP in the application.
